

# “T” Time With Elephants

by Guy Belleranti

Three interesting things about an elephant begin with the letter T – trunk, tusk and teeth.

An elephant's trunk has over forty thousand muscles and tendons. The trunk is a combination of the nose and the upper lip. An elephant uses its trunk for picking things up. It also uses its trunk for smelling.

An el  
from the e  
of incisor t

isks grow  
instead  
elephant

uses its tusks to drill for water and to dig up food.

All African elephants have tusks. Only some Asian male elephants have tusks. Some female Asian elephants also have tusks, but they are very small and hidden inside the mouth.

An elephant also has four other teeth. These teeth are molars. An elephant has one upper molar and one lower molar on each side of its mouth. Because an elephant eats a lot of plants, its molars get ground down. New molars move in to replace the old molars about every ten years. An elephant gets up to six sets of molars over its lifetime.
