1. Explain why the light bulbs won't light in the circuit pictured on the right.

   The circuit does not have a wire that returns the current to the battery’s positive terminal.

2. Explain why the light bulb isn’t lighting up in the circuit pictured on the right.

   The switch is lifted, which is stopping the current. If you lower the switch, the bulb should light.

3. Explain why the light bulb isn’t lighting up in the circuit pictured on the right.

   The electricity isn’t flowing through the bulb and socket. One of the wires needs to be connected to the other terminal of the light socket.
