

Name: _____

Volume of Rectangular Prisms

Unit Cubes

To find how many fractional unit cubes fit in the rectangular prism, express the dimensions in terms of total fractional units. Then multiply.

Note: If applicable, convert to the common denominator first.

$$4 \times 5 \times 7 = 140 \frac{1}{3}\text{-cm cubes fit}$$

To find the volume, first determine how many fractional unit cubes fit inside a whole unit cube by cubing the common denominator.

$$3 \times 3 \times 3 = 27 \frac{1}{3}\text{-cm cubes fit inside 1 1-cm cube}$$

Multiply the number of $\frac{1}{3}$ -cm cubes by $\frac{1}{27} \text{ cm}^3$ per cube.

$$140 \times \frac{1}{27} = 5 \frac{5}{27} \text{ cm}^3$$

total $\frac{1}{2}$ -cm cubes: _____

total $\frac{1}{3}$ -m cubes: _____

total $\frac{1}{4}$ -m cubes: _____

total volume: _____

total volume: _____

total volume: _____

d.

e.

f.

total $\frac{1}{5}$ -mm cubes: _____

total $\frac{1}{4}$ -cm cubes: _____

total $\frac{1}{2}$ -mm cubes: _____

total volume: _____

total volume: _____

total volume: _____
