**Flower**
The part of the plant that makes seeds.

**Stem**
Supports the plant; has many tubes that carry water, food, and minerals through the plant.

**Leaves**
Makes food (sugar) for the plant; takes in carbon dioxide and releases oxygen into the air.

**PREVIEW**

Roots
Soaks up vitamins and minerals from the soil. Stores food for the plant.

Fruit
Protects and holds the seeds of the plant. Many animals eat this plant part, which helps the seeds spread.
