# Mary Anning

**Y**ou've likely seen huge fossils on display in museums. Imagine digging in the ground and finding one of those! Mary Anning found many whole fossils starting when she was just 12 years old!

Mary was born in England in 1799. When Mary was little, she loved searching for fossils with her father. Her family was poor. Mary sold the fossils she found to make extra money. After her father died, selling fossils became the main way her family made money.

With the help of her brother, Mary made many scientific discoveries. She found the first complete skeleton of a *Plesiosaurus* in 1823. This was a type of large marine reptile. Mary also found the first ever fossil of an *Ichthyosaurus*. The name means "fish lizard,"
