# Animal Migration

by Kimberly M. Hutmacher

Have you ever noticed that we only see certain animals in certain seasons? Many animals move from one area to another at different times during the year. This movement is called migration.

These journeys are often thousands of miles. It's amazing that so many animals are able to find their way back to the very same places in the world year after year.

Animals migrate for different reasons. Some, like the manatee and the Ruby-Throated Hummingbird, migrate to stay warm in the winter.

Loggerhead Turtles travel thousands of miles to lay their eggs on the very same beach where they were hatched themselves.

Some animals migrate for protection. Caribou migrate to evergreen forests to escape from the cold and to find a food supply.

migrating  
the tree that  
ons before.

Other animals, like the Emperor Penguin, migrate for their children. These penguins choose the coldest time of year and the coldest place on the planet- Antarctica- to raise their young. They migrate inland, away from the sea, so they are far away from predators when their eggs hatch.

California Gray Whales have the longest migration journey of any mammal. They travel 10,000-14,000 miles round trip each year.

We know the many reasons why animals migrate, but no one really knows how they find their way. They do not have a map, compass or GPS to guide them. Maybe you will become the famous scientist that solves the mystery of animal migration.
