Achoo!  We all sneeze sometimes.  Sneezing is a reflex that your body does automatically.  That means you cannot make yourself sneeze or stop one once it has started.  When you sneeze, your body is trying to get rid of bad things in your nose, such as bacteria.  You have extra germs when you have a cold, so you sneeze a lot more.  You might also sneeze when you smell pepper!

Inside your nose, there are hundreds of tiny hairs.  These hairs filter the air you breathe.  Sometimes dust and pollen find their way through these hairs and very important to wash your hands after you sneeze into them, especially during cold and flu season.

Do you ever sneeze when you walk into bright sunlight?  About 25% of people experience this phenomenon.  Scientists believe that the brain gets confused when signals from the optic nerve trigger the sneezing reflex in direct sunlight.  This usually runs in families.

If someone nearby sneezes, remember to tell them “Gesundheit!”  That is a funny-looking word which is pronounced “gezz-oont-hite.”  It is the German word that wishes someone good health after sneezing.
1. Which parts of your body work together when you sneeze?

In the article, “Achoo!” by Cindy Sherwood, you learned that a sneeze is an automatic reflex in the body that you cannot stop once it has started. You also learned that even though you cannot stop a sneeze, you can help stop the germs that may be exiting your nasal passages to stop from spreading to other people.

On the lines below, discuss some ways that you can prevent the spread of germs when you sneeze. Use the information from the article as well as your own knowledge to answer the question.

1. Which parts of your body work together when you sneeze?

When you sneeze, your brain, lungs, nose, mouth, and upper body muscles work together.

2. What does the German word *gesundheit* mean?

   a. I wish you good health.
   b. I wish you God's blessings.
   c. I wish you a good day.
   d. I wish you would stop sneezing.

3. Why do some people sneeze when they walk into bright sunlight?

   The brain mixes up signals from the optic nerve, which triggers the sneezing reflex in some people.

4. Complete the web with information from the article.

   The body is trying to get rid of dust or pollen or germs or bacteria. 
   - Sunlight causes the brain to confuse signals from the optic nerve that triggers the sneezing reflex.
