There might not be anything cooler in the whole ocean than a coral reef! In fact, coral reefs are actually some of the most fascinating living communities on Earth.

Did you ever wonder how a coral reef forms? Tiny animals called coral polyps are responsible for the formation of coral reefs. The coral polyps attach to rocks or other hard surfaces and continue to grow throughout their lifespan. When they die, they harden. Then new coral polyps grow on top of them. This makes the reef expand. In fact, coral reefs are always growing. They grow about 1-2 cm per year.

Let’s talk more about these little coral polyps. Like all animals, coral polyps need to eat. Their diet consists mainly of other miniscule animals, such as plankton and algae. The algae get their food from the sun. Because sunlight can only penetrate shallow water, the algae and coral polyps live in shallow water. This is where coral reefs generally form. A wide variety of animals live in coral reefs. Some animals live on the actual reef, like starfish, snails, and clams. Other species swim around the reef, like fish and sharks.

There are three types of coral reefs. Fringing reefs form along a coastline. Barrier reefs grow a bit farther from the land. They form parallel to the shore, separated from it by a deep channel of water. Finally, coral atolls are coral reefs that encircle a lagoon.
Coral reefs exist all around the world. The biggest one is called the Great Barrier Reef. The Great Barrier Reef is located off the northeast coast of Australia. It is very long, stretching out for 2,300 kilometers. It can even be seen from outer space! Every year, the beautiful Great Barrier Reef attracts many scuba divers and tourists, about 2 million visitors per year.

Coral reefs are a vital part of our planet. First of all, they are a home for many animals. They also protect shorelines against storms and floods. They can even provide us with the natural resources we need to generations to come!

Coral reefs are rainbows of color. Coral polyps can be orange, pink, blue, green, red, or almost any color imaginable.

**About the Author**

Lydia Lukidis is a published children’s author with a multi-disciplinary background that spans the fields of literature, theater, and puppetry.

Lydia's picture book, *Gerbs in the House: The Dilly Dally Bedtime Routine*, is now available. Find out if Mocha will ever get his silly son to sleep!

Coral Reef: The Ocean’s Coolest Neighborhood
By Lydia Lukidis

1. Describe the rate at which coral reefs grow. Use information from the article to support your answer.

_________________________________________________________________________________________________________________________________________

2. Why are coral reefs found mostly in shallow water?
   a. Coral reefs thrive in shallow water because the sunlight penetrates the water and provides food for the algae that coral polyps eat.
   b. Coral reefs are protected in shallow water from damage by huge ocean animals like whales and great white sharks.
   c. Coral reefs cannot survive the saltiness of deep ocean water.
   d. Coral reefs cannot endure the currents in deep ocean water.

3. Based on the information in the article, provide a brief definition of each of the three types of coral reefs.

   Fringing Reef: ____________________________________________________________________________
                                                                 ____________________________________________________________________________

   Barrier Reef: ____________________________________________________________________________
                                                                 ____________________________________________________________________________

   Coral Atoll: ____________________________________________________________________________
                                                                 ____________________________________________________________________________

4. Circle the two hemispheres that the Great Barrier Reef is located within.

   Northern   Southern   Eastern   Western

Super Teacher Worksheets - www.superteacherworksheets.com
Match each vocabulary word from the article with the correct definition.

____ 1. variety  
   a. to form a circle around

____ 2. tourists  
   b. extremely important or necessary

____ 3. formation  
   c. to say something will happen in the future

____ 4. encircle  
   d. very tiny; microscopic

____ 5. pollution  
   e. a long passage of water

____ 6. vital  
   f. people who visit or travel to a place for pleasure

____ 7. miniscule  
   g. a pool of salt water separated from the ocean by a coral reef

____ 8. channel  
   h. the act of being formed or developed

____ 9. predict  
   i. the presence of harmful substances in the environment

____ 10. lagoon  
   j. a number of different things
Coral Reef: The Ocean's Coolest Neighborhood
By Lydia Lukidis

In the article, “Cool Coral Reefs,” you learned that coral reefs are very important for the well-being of our planet.

On the lines below, describe some of the ways that coral reefs benefit the environment. Then describe what you think might happen if all the coral reefs of the world disappear from damage and pollution. Finally, give one suggestion for protecting the coral reefs.

1. Describe the rate at which coral reefs grow. Use information from the article to support your answer.

   Coral reefs grow extremely slowly, at a rate of approximately 1 to 2 cm per year.

2. Why are coral reefs found mostly in shallow water?
   a. Coral reefs thrive in shallow water because the sunlight penetrates the water and provides food for the algae that coral polyps eat.
   b. Coral reefs are protected in shallow water from damage by huge ocean animals like whales and great white sharks.
   c. Coral reefs cannot survive the saltiness of deep ocean water.
   d. Coral reefs cannot endure the currents in deep ocean water.

3. Based on the information in the article, provide a brief definition of each of the three types of coral reefs.
   - Fringing Reef: Fringing reefs form along the coastline.
   - Barrier Reef: Barrier reefs form parallel to the shore, with a channel of water running between.
   - Coral Atoll: Coral atolls form around a lagoon like a circle.

4. Circle the two hemispheres that the Great Barrier Reef is located within.

   - Northern
   - Southern
   - Eastern
   - Western
