For years, humans have waged war with the dandelion. Most people consider dandelions pesky weeds, and will go to great lengths to get rid of them. They pluck them from their gardens. They pull them up by the roots, or resort to killing the plants with chemicals. But our war with the dandelion may soon be over. Although considered a weed, it’s no secret that the dandelion has its uses. Young dandelion leaves, called “greens,” make a delicious and highly nutritious salad. Dandelion plants have a long, thin root called a taproot, which grows deep into the soil. The taproot creates tunnels in the soil, which allow water and air to mix in and keep soil healthy. Dandelion flowers also attract ladybugs. Ladybugs are good to have in gardens because they feast on small insect pests. Despite its useful leaves, roots, and flowers, however, most people still think of the dandelion as a simple weed. It’s the sap, though, that just might change their minds.

If you’ve ever picked a dandelion, you’ve probably noticed the milky sap that oozes from the stem. Dandelion sap is super sticky, and amazingly, is a natural source of rubber. Around 30,000 different products are made from rubber today, including tires, soda drink bottle tops, tubing, and gloves. Most of these products are made from rubber that comes from the rubber tree. But there are problems with these products. Some rubber trees are not likely to be allergic to dandelion rubber. Still, scientists have some questions they need to answer before we can make dandelions our main source of rubber. Some scientists believe that in less than five years, we will have those answers and will finally end the war with this so-called weed. When we make peace with the dandelion, at long last, we’ll be planting it, instead of pulling it!
Making Peace with Dandelions

By Liana Mahoney

1. Does the author have a positive or negative view of dandelions? Explain your answer.
________________________________________________________________________________
________________________________________________________________________________

2. Which fact is not mentioned in the article?
   a. Dandelions help keep soil healthy.
   b. Dandelions can make a delicious snack.
   c. Dandelions can make a lawn look more colorful.
   d. Dandelions might be used to make rubber someday.

3. According to the article, how might dandelion rubber be better than rubber from rubber trees?
________________________________________________________________________________
________________________________________________________________________________

4. Tell whether each statement is a fact or an opinion. Write F or O on the line next to each sentence.
   _____ Some people pluck dandelions from their lawns.
   _____ Dandelions make a great addition to any lawn.
   _____ Dandelions are tasty.
   _____ Ladybugs eat small garden pests.
Making Peace with Dandelions

The author has a positive view of dandelions because she explains how dandelions can be beneficial to humans.

People are not likely to be allergic to dandelion rubber, and dandelions grow faster than rubber trees.

____ O Dandelions make a great addition to any lawn.
____ O Dandelions are tasty.
____ F Ladybugs eat small garden pests.
