# The Amazingly Adapted Polar Bear

by Guy Belleranti

Animals have special adaptations that help them survive in their habitats. One of the most interesting is the polar bear of the Arctic.

To stay warm, polar bears have two layers of fur. The hairs of the outer coat are hollow, increasing their insulating ability. They also have a thick, warm coat of fur below the outer coat. Underneath their fur polar bears have black skin which helps absorb heat. Underneath this skin polar bears can put on a layer of fat for even more insulation. In fact, during the cold of winter this fat may be over 4 inches thick!

Polar bears are adapted for providing camouflage and insulation isn't

While they are the

their paws over their black nose and mouth. Polar bears have the best vision of any bear and an excellent sense of smell. Fur and rough bumps on the soles of their wide snowshoe-like feet provide traction on ice.

d water, cause extra  
unt. In fact, by placing

Polar bears are well adapted for swimming to ice floes in search of their favorite food - seals. They use their partially webbed front feet to paddle, while steering with their back feet. They have a more elongated body and head than other bears. This shape helps them move through the water. In fact, this marine mammal can swim for 60 miles without stopping.
