

Name: _____

The World's Largest Deer

by Guy Belleranti

What animal has a long, big-nosed head, a bulky body on long skinny legs, and a big flap of furry skin hanging from its throat? The world's largest deer – the moose.

The moose's big nose gives it a great sense of smell. The big body gives it strength. The long legs help it walk through deep snow, step over logs,

Moose may not look like fast runners, but their looks are deceiving. If a moose feels threatened, it can charge at 35 miles an hour. Mothers are very protective of their calves, who along with the old and sick, are most vulnerable to predation by wolves, bears and mountain lions.

Moose are herbivores or plant eaters. They eat tall grasses, leaves, twigs, buds, berries, pinecones, bark, and other vegetation. In warmer months, they spend lots of time in lakes, ponds, and rivers cooling off. They're very good swimmers and will dive underwater to find tasty greens.

Only bulls grow antlers, and what a work of art their antlers are. They're flattened and huge, with a spread of four to six feet!

Name: _____

The World's Largest Deer
