

# Human Body Scavenger Hunt Activity

## Materials:

Human Body questions worksheet (pages 2-3)  
18 human body fact cards (pages 4-8)  
Tape and scissors

## Preparation

Print the fact cards on card stock or brightly-colored paper and cut them apart along the dotted lines.

Make copies of the human body questions worksheet (2-sided). Each student will need his or her own copy.

Hide all 18 human body fact cards around your classroom where students will be able to find them. You can put them on the back of your classroom door, on chairs, on the computer keyboard, on the sides of student desks, or wherever you like.

You may want to make this a silent activity so students don't share answers with each other.

You can have the kids work by themselves or with partners.

Don't be afraid to hide the facts in tough places. Kids think it's more fun when they have to search around a little.

## Examples of good hiding spots might include:

- sticking out of a book, like a bookmark
- the back of the classroom door
- laying flat on the bookshelf
- on the back of the teacher's chair
- on the side of your computer monitor

Have a plan for students who finish early. You may want to have an assignment for them to complete when they're done, or you may have them help other students find fact cards.

### Scavenger Hunt

## Human Body

Fact Card

# 1

Your heart is the hardest working muscle in your body. It beats over 35 million times each year!

### Scavenger Hunt

## Human Body

Fact Card

# 2

Your liver is the largest organ in your body. It cleans your blood, and makes chemicals for your body. The liver has over 500 jobs.

Your heart is about as big as your fist.

A person is born with about 300 bones in their body. An adult only has 206 bones in their body. When people grow, many of their bones combine together.

### Scavenger Hunt

## Human Body

Fact Card

# 5

Your left lung is a little bit smaller than your right lung. This makes room for your heart.

### Scavenger Hunt

## Human Body

Fact Card

# 6

It takes 17 muscles to smile.  
It takes 43 muscles to frown.

If you could stretch it out, your small intestine would be about 22 feet ( 670 centimeters) long.

You have two kidneys that clean your blood. They remove chemicals that your body cannot use.

### Scavenger Hunt

## Human Body

Fact Card

9

Your liver makes bile. Bile is a chemical that makes your stomach acid safe for your body.

### Scavenger Hunt

## Human Body

Fact Card

10

There are four types of human blood. They are: A, B, O, and AB. The most common type of blood is O. The least common type is AB.

White blood cells kill disease and viruses. They also heal your skin when you get a cut.

Your lungs put oxygen in your blood. They also remove carbon dioxide.

### Scavenger Hunt

## Human Body

Fact Card

# 13

Your brain stem controls your breathing, heart beat, and stomach.

### Scavenger Hunt

## Human Body

Fact Card

# 14

Nerves are like small wires that run from your brain to other parts of your body. Nerves send signals to your body. You need nerves to feel things with your skin and to move your muscles.
