# Jupiter

by Cynthia Sherwood

If Jupiter were a person, it might run around chanting "I'm number one! I'm number one!" That's because Jupiter is the largest planet in our solar system and the one that spins the fastest. It also has the most moons of any planet and the largest

moon. Jupiter also has the strongest gravity of all the planets. Ancient astronomers knew what they were doing when they named Jupiter after the Roman king of the gods.

It would take about a thousand Earths to fill up Jupiter. But for a gigantic planet, Jupiter moves very fast. It rotates on its axis about every ten hours, compared to Earth which takes 24 hours. Jupiter takes about 12 years to orbit the sun.

Jupiter isn't first in everything. It's the fifth planet from the sun and it's only the third brightest object in the night sky, behind the moon and Venus.

discovered by the astronomer Galileo in the year 1610 using one of the earliest telescopes. The largest of Jupiter's moons is named Ganymede. It's even bigger than the planet Mercury!

Six space probes have traveled to Jupiter, so scientists have a lot of information about the planet. You can do your own study of Jupiter just by staring at the night sky. If you see a really bright star that's high in the sky, you're probably seeing Jupiter, the number one planet.
