

Name: _____

Pluto

by Cynthia Sherwood

Poor, poor Pluto. Scientists now say it's not a true planet. Since 2006, they have called Pluto a *dwarf planet*. They believe Pluto is too small and its orbit around the sun too irregular to be the ninth planet in our solar system.

Pluto is so far away from Earth that it can't be seen without a telescope. It was only formally discovered in 1930. That's when powerful telescopes took the first photographs of Pluto. The news made huge headlines throughout the world.

Scientists received hundreds of suggestions of what to name the new planet. An eleven-year-old girl from England had the winning idea—she suggested Pluto, the name of the Roman god of the underworld. She thought the name made sense because Pluto is such a dark and icy

Charon, the largest moon, was discovered in 1978.

Two smaller moons were discovered in 2005. They were named Nix and Hydra.

Do you think astronomers will find any more?

Even if we could build a rocket that could travel to Pluto, we wouldn't want to stay for long. Because Pluto is so far away from the sun, its surface is one of the coldest in our entire solar system. If you ever cook with an adult, you know that it's common to set the oven to 375 degrees Fahrenheit (190 degrees Celsius). Pluto is 375 degrees too—but 375 degrees below zero!

Name: _____

Pluto
